History AutoCAD Mobile App AutoCAD Mobile App was introduced on August 30, 2018.

Available on the App Store and Google Play store. File Types AutoCAD is a native Windows application and can open any DWG (dwg) or DXF (dxf) file that is created by AutoCAD. It can be installed on a USB drive. AutoCAD is designed to be used without having AutoCAD installed on a computer, so it can be installed and run from a USB drive. The following file types are supported by AutoCAD: AutoCAD Level 1 and 2 DXF Files and DWG Files The DXF format is supported by all AutoCAD releases since version 12. The DWG format is supported by AutoCAD releases since version 16. AutoCAD Levels 1 and 2 Versions AutoCAD Level 1 was introduced in 1982 as a desktop application. This release was the first native, DOS-based AutoCAD. In 1986, AutoCAD Level 2 was introduced, which was the first AutoCAD to support Windows. AutoCAD Level 1 was discontinued in 1995. AutoCAD Level 2 Versions AutoCAD

Level 3 was the first release that supported Windows 3.x, and introduced a variety of new features. AutoCAD Level 3 Versions In 1999, AutoCAD Level 3 was introduced. This release supported Windows 3.1 and 3.11. It also introduced new features including the creation and editing of 3D objects. AutoCAD Level 3 was discontinued in 2007. AutoCAD Level 4 Versions AutoCAD Level 4 was introduced in 2007. It was the first release to support Windows XP, Windows Vista, and Windows 7. AutoCAD Level 5 Versions AutoCAD Level 5 was introduced in 2009. This release was the first to support Windows Vista 64-bit and Windows 8 64-bit. It also introduced support for file compression (zip files) and USB mass storage. AutoCAD Level 5 was discontinued in 2016. AutoCAD 2019 AutoCAD 2019 was introduced in 2016. It was the first release to support Windows 10 64-bit. It introduced several major upgrades including large screen support, changes to the interface, and new application management capabilities. AutoCAD 2019 was discontinued in 2019.

Field of the Invention The present invention relates to a waveform shaping circuit and a display system using the same. 2. Description of the Related Art As information communication technologies have advanced in recent years, an information communication device has come to provide not only a function of transmitting and receiving facsimile data or the like but also a function of transmitting and receiving voice, moving pictures, and the like. In an information communication device of this type, a modulation system is known for producing a signal waveform to be transmitted by combining a carrier wave and a signal waveform. To put it concretely, a DQPSK modulation system, for example, has been used. As for the DQPSK modulation system, in addition to a code conversion system, a level conversion system is known. In the level conversion system, a modulation signal is converted into a waveform having a specific level by adjusting a driving signal (waveform) to be supplied to a modulator. Further, for example, Patent Document 1 discloses a technique for generating a drive signal (output waveform) of the modulator by using a hard-wired circuit. FIG. 14 is a block diagram showing a configuration example of a conventional waveform shaping circuit. Referring to FIG. 14, a conventional waveform shaping circuit 1 includes a comparator 1_1, a hold circuit 1_2, a selector circuit 1_3, an AND circuit 1_4, and a clocked inverter 1_5. Further, the comparator 1_1, the hold circuit 1_2, the selector circuit 1_3, and the AND circuit 1_4 form a hard-wired circuit (level conversion circuit) 1_6, and the clocked inverter 1_5 forms a clocked inverter 1_7. The comparator 1_1 has one input terminal which is a pulse waveform input terminal, which receives a pulse waveform as an input signal in the form of a digital signal (or
