

I'm using Windows XP Home Edition, which recently started to run VERY slowly. . MAGIX Ringtone Maker 2 silver (US) (Version: 2.0.1.3) could not create a ringtone. At first I thought it was due to a misconfiguration, but when I tried to make a melody from a song and paste it into the program, it took too long to create music. I tried booting Windows XP Home Edition to a new drive, but that didn't work either. What should I do? If this is a new version of Windows XP, then the reason for the slow startup is a memory issue. Is there a version
