AutoCAD supports the 2D and 3D drawing of two-dimensional (2D) and three-dimensional (3D) objects. It allows the construction of complex geometric figures and assemblies (Component) using parametric and solid modeling techniques. It supports 2D and 3D drafting including mechanical, civil, electrical, mechanical, architectural, mining, construction, and architectural drafting. Its simulation feature in the 2D Drafting Environment (D2E) is used by architects, engineers, and contractors to design using computer-aided design (CAD). Its simulation feature in the 3D Drafting Environment (D3E) is used by artists, graphic designers, and architects to create three-dimensional (3D) models for use in computer-aided design (CAD) software. AutoCAD is part of the Autodesk Suite. Overview [ edit ] AutoCAD is used by architects, engineers, contractors, and artists to model and draw 2D and 3D objects (Figures 1 and 2). It is used to design, create, view, edit, and print 2D and 3D drawings, models, and sheets (Figures 3 and 4). The application can simulate the drafting environment to create 2D and 3D models and sheets, including construction drawings, architectural layouts, and mechanical and civil engineering.

Its main window (or 'desktop') contains the following objects: The program's main tool bar is on the left side of the window. The program's ribbon contains the following features: On the right side of the window, additional objects are displayed as thumbnails. The AutoCAD Ribbon has three panels: The AutoCAD Ribbon is customizable and customizable. The auto-arrange panel can be renamed, moved, or removed to suit the user's preferences. To customize the ribbon and move panels to the top or bottom of the ribbon, right-click on any panel. The panels will then appear as a list of panels within the ribbon. Select the panel and drag it to the desired location

I have a project that is called "BlazorClientApp" and is located at E:\Work\BlazorClientApp\BlazorClientApp I created another project called BlazorClientApp (in the same folder) and I want to run this project inside the BlazorClientApp folder. In the BlazorClientApp project properties, the Target Type is set to "C#", and the Output Type to "Class Library". I set the startup project using the solution explorer and it was successful, but now I want to run the BlazorClientApp project inside the BlazorClientApp folder and not the blazorclientapp. Is it possible? A: You need to change the startup project to BlazorClientApp in order to open the BlazorClientApp inside the BlazorClientApp folder. See this Microsoft documentation to know more about the startup project.
